Penetrates, Seals, and Protects Asphalt Pavement

A Pavement Maintenance Program That Includes Periodic Sealcoating And Crack Filling Will More Than Double The Service Life Of Asphalt Pavement.

- Scheduled Pavement Maintenance Program Curve
 - Pavement Deterioration Curve - No Scheduled Maintenance

Superior Protection

PROTECTION FROM OXIDATION

PROTECTION FROM MOISTURE

PROTECTION FROM CHEMICALS

▶ Product Description...

AsPen AC is an asphalt based emulsion pavement rejuvenator designed to penetrate, water proof, and replenish the pavement binder that is lost through oxidation and weathering. AsPen AC is a single coat application product that penetrates into the pavement surface utilizing the existing pavement profile to maintain traction.

▶ AsPen AC Advantages...

- Does Not Require Sanding - AsPen AC produces a tack-free surface when dry and does not require sanding prior to opening pavement to traffic. The result is added savings and increased safety for vehicle traffic.
- Fast Drying - Allows pavement to be opened up to traffic soon after application (typically one to two hours). This means less down time and greater flexibility in scheduling performance of maintenance work.
- Attractive Black Color - AsPen AC's rich, deep black color gives oxidized pavement a "like new" appearance, enhancing the visibility of traffic markings.

▶ Professional Service...

SealMaster pavement sealers are applied by our nationwide and world-wide network of qualified pavement maintenance professionals to assure optimum product performance and customer satisfaction.

AsPen Uses: Roads, Streets, Malls, Airports, Highway Shoulders, and more.
