

Polymer-Modified Coal Tar Sealer

Polymer-Modified Coal Tar Sealer - (PMCTS)

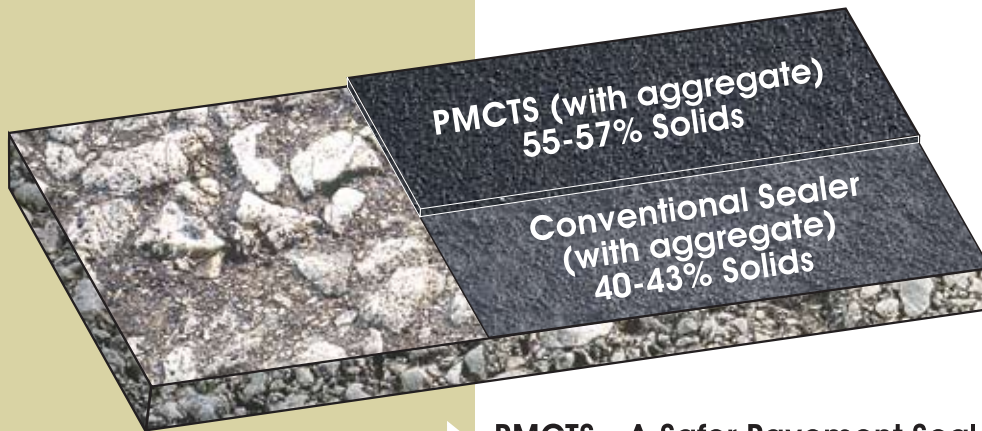

Polymer-Modified Coal Tar Sealer

Premium quality coal tar emulsion pavement sealer fortified with cross-linking rubber polymers.

High Solids Formula For Durability

▶ Unlike conventional sealers that require dilution of up to 50% with water, PMCTS's unique formulation allows for application at full strength without dilution. PMCTS is job mixed with specially graded aggregate to produce a coating that is applied at 55-57% solids, compared to conventional sealers which are applied at approximately 40-43% solids.

▶ PMCTS - A Safer Pavement Sealer For Pedestrian & Vehicle Traffic

PMCTS's high level of aggregate loading produces a surface coating with exceptional skid resistance in both wet and dry conditions. PMCTS provides property owners with a safer pavement for both motorists and pedestrians.

▶ Polymer Modification Makes The Difference

PMCTS incorporates the use of proven polymer technology. Elastomeric polymers are hot blended into PMCTS during the manufacturing process to produce a coating with added toughness, flexibility, adhesion, and weather resistance.

▶ Specialty Surfactants Provide Water Resistance

One of the leading culprits of pavement sealer wear is absorption of water into the dried sealer film. Specialty surfactants are blended into PMCTS during the manufacturing process to produce a coating with exceptional water resistance and greatly enhanced wear characteristics.

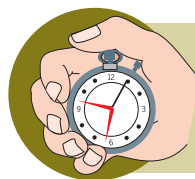

PMCTS - Superior Pavement Protection

PROTECTION FROM OXIDATION

PROTECTION FROM MOISTURE

PROTECTION FROM CHEMICALS

PMCTS DRIES FAST! - PMCTS's unique high solids formulation provides much faster drying time in comparison to conventional pavement sealers that are diluted with water prior to application.

PMCTS Surpasses Federal and ASTM Specifications - PMCTS far exceeds the composition and performance standards of ASTM D5727, RP 355e, ASTM D-3320-74T, U.S. Air Force and F.A.A. specifications.

Uses: Parking Lots, Airports, Driveways, Roadways
